

D-10S/A

10 CHANNEL SIMULTANEOUS LI-ION BATTERY CHARGER

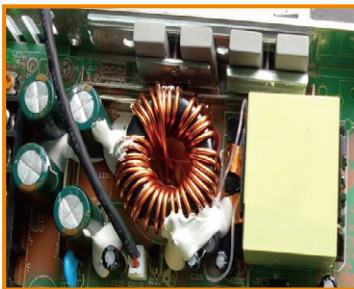

Great Craftship

Multiple tinning wires are adopt, which is high temperature resistant, -60°C~+200°C. It is corrosion-resistant, anti-aging, acid, and water/oil/fire proof. It allows the big current charging for several batteries together.

High Quality Fan

As an important component, high cost dual ball fan is adopted, it features silence, good heat dissipation and long operating life.

Stable Power Supply Module

Thick copper wire is adopted, it allows big current for fast charging without increasing temperature, working life is guaranteed.

Independent Charging Channel

D-10S/A adopt independent chip control to ensure each channel is controlled separately and has no interference to each other. Fast charging is achieved in this way. With self protection of over current&short circuit, batteries can be well protected. There is separate LCD screen&LED indicator for each channel to read the charging status and battery voltage.

Customize Needs

The charger body is all metal, the handle is 304 stainless steel material, hard&strong. If you need to put your info on it, we can laser print for you.

Specification:

Input	AC 90V~240V/47Hz~63Hz
Charger Output	DC 16.8V/2.5A
Dimension	705x185x280mm
Weight	9.15Kg

D-10S For V-Mount Batteries
D-10A For Gold Mount Batteries
